

MyRecovery

Backup, disaster recovery & prevention

Safeguarding your business and its reputation.

Is your business prepared for an IT crisis?

Today's organisations are dependent on data, information and communication systems, supported by an IT infrastructure to keep them up and running, yet many fail to see the value of disaster recovery and business continuity planning until it's too late.

Without suitable preparation or an understanding of how to deal with such an emergency, how will your operations continue through the disruption? The cost of downtime, loss of data and damage to the reputation of your business can be huge. You may also be at risk if you do not meet legal and regulatory requirements.

Need a solution?

Epoq IT has developed MyRecovery, an integrated suite of measures to safeguard your business and its reputation.

Solutions incorporate:

- Email archiving – never lose an email
- Email continuity – zero downtime on emails
- Business continuity – your IT infrastructure will continue to operate should a disaster occur
- Testing – peace of mind that prevention or recovery works when it matters
- Quick response – aligned with your requirements to keep critical systems operating

Benefits:

- Expert consultants to ensure everything is updated and tested
- Tailored to help meet regulatory requirements around business continuity
- Supports GDPR compliance
- Fully tailored to incorporate your company policies
- Protects your business against downtime, regulatory risks and reputational damage
- Demonstrates that you have taken all necessary precautions to minimise cyber security threats
- Protect against Ransomware
- Reduces insurance premiums
- Increases opportunities for procuring government and private contracts
- Cost effective packages for SMB's based on monthly subscription

Other packages available include
