

MySecurity

Cyber security management

Protecting your business against cyber threats.

How secure are your IT systems?

One in four small to medium sized businesses in the UK experienced a cyber security breach last year. As attacks on IT systems become an almost daily occurrence, do you have a strategy in place that balances access to confidential and sensitive data whilst providing the protection you need?

Cybercrime remains a reality for every organisation. With back-end systems holding thousands of personal records, the risk of being hacked is too dangerous to ignore and the damage to your business reputation immeasurable. You may also face compliance infringements and huge fines.

Need a solution?

Epoq IT has developed MySecurity, an integrated suite of measures to safeguard your business against the threats in the Internet of Things (IoT) era.

Solutions incorporate:

- Boundary firewalls – preventing unauthorised external access
- Access control management – restricting authorised access to only those that need it
- Patch management – maintaining systems with the latest security updates
- Virus and Malware protection – protecting against threats such as Ransomware
- Implementing a layered security approach to mitigating risk

Benefits:

- Expert consultants to ensure everything is updated and tested
- Designed to meet regulatory requirements around cyber security
- Supports GDPR compliance
- Fully tailored to incorporate your company policies
- Cost effective packages for SMB's based on monthly subscription
- Protects your business from growing threats
- Demonstrates that you have taken all necessary precautions to minimise cyber security threats
- Remediation
- Reduces insurance premiums
- Increases opportunities for procuring government and private contracts
