

# Leased Lines

A dedicated connection for your office

## Leased Lines from hSo:

Leased lines are the perfect way to link your office to the Internet, to other offices and to hosted servers.

Leased lines offer high bandwidths and fast upload speeds. Being uncontended, they won't slow down at peak times. They're also unmetered, sparing you from download limits or 'fair usage' restrictions.

# Leased Lines

## hSo's Leased Lines key benefits:

### Great prices

We compare wholesale quotes from the UK's major network operators to find the best value option per site.

### Access ALL the major networks

We pick from all the UK's major operators, including BT, Virgin Media and TalkTalk, to connect you to our own MPLS network.

### Full range of options

Bandwidths from 2Mbps to 10Gbps.  
Fibre-optic and EFM options.  
Contract flexibility (1–5 years).

### 24/7 UK support

Our UK-based technicians are on hand, day and night, to help keep everything running smoothly.

### Reliably monitored for you

We proactively monitor your circuit 24x7, ready to nip in the bud any potential issues. Our service can be fully managed and is backed by rigorous SLAs too.

### VoIP compatible

Calls can be prioritised over other network traffic by our QoS-enabled MPLS network.

## Additional benefits:

### Free installation

We offer FREE installation on contracts of three years or more.

### Extra Resilience options

We can combine leased line circuits from several carriers to deliver unusually high levels of uptime. If there's a problem with your main circuit, your network automatically switches to a backup connection.

### Quality & Information Security

hSo's processes are certified by ISOQAR for Quality (ISO 9001) and Information Security (ISO 27001).

### Make it part of a wider solution

We can deliver the leased line as part of a wider solution, for example one that incorporates Internet Access and a WAN.

## hSo in facts and figures

- Founded in 2000
- Serving businesses only
- 30+ data centres
- ISO 27001 / ISO 9001 / ISO 20000
- 24/7 UK support
- Our own low latency MPLS network
